

# THE MAILING INDUSTRY JOB STUDY

A DYNAMIC CORE FOR THE UNITED STATES ECONOMY

MARCH, 2011

---

## INTRODUCTION

---

This study represents the EMA Foundation's third report measuring the economic scope and impact of the mailing industry on the United States economy<sup>1</sup>. This study like the two that preceded it shows that the mailing industry touches every private and public sector of the economy. The breadth of the impact is not surprising. Even as access to high-speed internet and mobile data expands, mail remains a critical part of the infrastructure for communications among consumers, businesses, and government at all levels. In particular, the new technologies expand the demand for the parcel delivery services that the mailing industry provides.

The current study's estimations replicate the analysis conducted in the 2008 study in the measurement of jobs and economic activity. The current study contains no changes in the previous methodology for measuring economic activity. The current study did include a number of changes that improved the estimation of the jobs created by the supply chain of the Postal Service delivery. It also more fully measured the impact of the jobs created by the delivery of parcels by the industry.

Jobs and economic activity associated with the mailing industry were divided into three areas:

1. **Public and private sector entities that create mail, deliver mail and parcels, and provide retail acceptance or delivery services.** The creation of mail involves firms in the mail production supply chain and includes not only jobs in the printing industry but also includes the suppliers of everything from paper and envelopes to the machinery used to print and assemble a finished mail piece.

The delivery of mail and parcels includes the economic impact of the three largest entities in the industry: the Postal Service, United Parcel Service and FedEx, and also includes numerous regional and local carriers that deliver both parcels and mail. This delivery of mail and parcels has its own supply chain as these companies contract for significant portions of the transportation and delivery services needed to provide end-to-end services and to purchase both capital equipment and consumables necessary to provide delivery services.

---

<sup>1</sup> Previous studies were completed in 2005 and 2007 and were prepared by Direct Communications, Transformation Strategy and SLS Consulting. This study was prepared by Direct Communications with support and comment from Transformation Strategy.

2. **Entities that use mail and send and receive parcels as part of their everyday business operations.** This segment includes the jobs associated with mail within every business, non-profit, and government entity in the United States. These entities use mail as part of the transaction cycle that flows from customer acquisition through payment for the good or services. The heaviest users of mail are those in which paper-based transactions remain a central part of their business model and mail remains an important way to communicate with existing and potential customers. Only jobs related to this segment within a company or business were measured.
  
3. **Entities that sell products using mail advertising or use the mailing industry to deliver their products.** This segment includes economic activity from direct mail marketing, publishing, retailers, wholesalers and manufacturers that ship their products using the mailing industry. Of the latter group, this study includes sales of goods via the web.

The current 2010 mailing industry job study estimates that the mailing industry generated \$1.139 trillion in economic activity in 2009 (the most recent year of which data is available) which was a slight decline from the \$1.202 trillion in economic activity measured for 2006. While the difference was slight between 2006 and 2009, the industry saw a shift in economic impact among its components. The Postal Service, the entire mail production supply chain, and publishers generated less revenue in 2009 than in 2006 while sales generated by mail advertising and then delivered by the mailing industry regardless of whether the sale was consummated by e-commerce, mail, or telephone grew.

In summary, this study demonstrates the continuing power of mail as a communications channel and it shows some areas of industry growth, particularly associated with ecommerce and parcel delivery. At the same time the study continues to trace the decline of jobs in the core mail production supply chain.

As in the previous study, this study used the most recent information collected by the Direct Marketing Association, the United States Postal Service, the U.S. Department of Labor in its Occupation Statistical Program, and the U.S. Census Bureau in its Economic Census. In this study, information from the Department of Commerce's Bureau of Economic Affairs was added.

Using the old methodology but incorporating updates in the data collected by the U.S. Government and the Direct Marketing Association, the total number of mailing industry jobs in 2009 was 8,430,123, a slight increase from the 8,318,239 jobs estimated for 2006. The difference primarily reflects an increase in the number of jobs associated with occupations that include mail handling as part of everyday activity. There has been an increase in outsourcing of mail intensive activities that resulted in more mail related occupations being recorded in the Department of Labor Survey. This practice may not have actually increased the number of jobs, but in fact it may have lead to new efficiencies and job reductions. However, these jobs in specialized firms are now more visible to the U.S. Labor Department.

The new study included two major improvements from the previous study through a use of a new method used to estimate the jobs created by the Postal Service's supply chain and through the

inclusion of ecommerce retailer jobs that were not included in the previous study. These changes produced our final estimate of mailing industry jobs of 8,661,394.<sup>2</sup>

---

## IMPLICATIONS OF THE RESULTS

---

The mailing industry represents over 7% of the nation's GDP and over 6% of the nation's jobs.

While these proportions are significant, we believe that the estimates are conservative. Jobs associated with the spending multiplier effects by industry employees are not included. Similarly, the supply chain jobs associated with private sector firms that provide delivery services of printed communications and parcels are not included. Finally, jobs and economic activity in the e-commerce divisions of traditional retailers, such as Wal-Mart, Target and Sears, are not included as economic activity.

The study indicates that while the core industry that produces and delivers paper-based communications is shrinking, the overall impact of the industry remains strong. The decline of the core paper-based communication portion of the industry reflects a decline in volume. Countering this decline is the increase in economic activity that the mailing industry supports by delivering the goods sold through e-commerce and supporting e-commerce sales through mail based advertising. This segment of the mailing industry had growth in economic activity and jobs through the recession even as jobs and economic activity declined in the United States as a whole.

Finally, the study clearly shows that the Postal Service's impact on the economy is substantially larger than can be reflected by its own revenue and the jobs of the Postal Service or its suppliers. The Postal Service represents only 8.3 % of the jobs mailing industry. Adding in postal suppliers, the Postal Service supply chain represents less than 10% of the jobs of a mailing industry that relies on its ability to provide nationwide universal delivery of printed communications and parcels.

---

<sup>2</sup> If additional e-commerce and catalog industry jobs (that were created by sources other than mail advertising) had been included in 2008 study, the number of jobs estimated in 2008 would have been 8,571,179.

---

**ECONOMIC IMPACT OF THE MAILING INDUSTRY**

---

In 2009, the mailing industry generated \$1,139 trillion in sales revenue which is over 7% of the United States' gross domestic product.

Figure 1 illustrates that the economic activity generated by the industry comes primarily from the sales of products and services that are advertised or delivered by the mailing industry.

*Figure 1: Proportion of Mailing Industry Sales associated with Creating Mail, Delivering Mail and Parcels, and Sales Generated by Mail Advertising or Delivered by the Mailing Industry.*

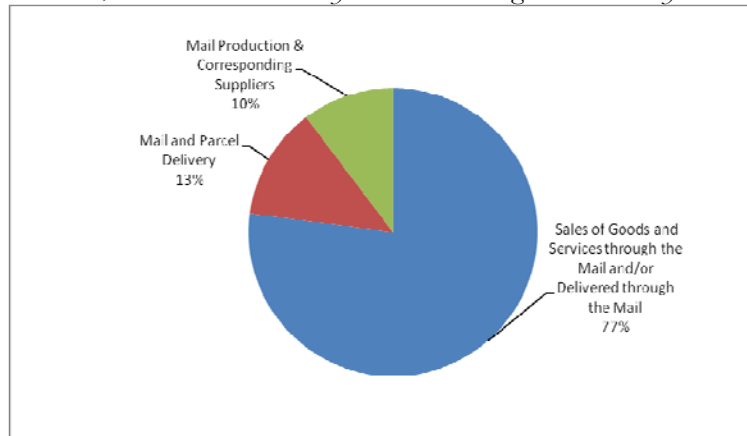

Figure 2 provides more detail on the delivery and sales portions of the chart in figure 1. It illustrates that the Postal Service, while the core of the mailing industry, represents only 6% of the revenue generated by the industry. Figure 2 also illustrates the point that the private sector portion of revenue associated with delivering mail and parcels was greater than the revenue of the Postal Service. In the previous study, the private sector delivery services represented a smaller share of the mailing industry than the Postal Service.

*Figure 2: Distribution of Sales across Major Segments of the Postal Industry*

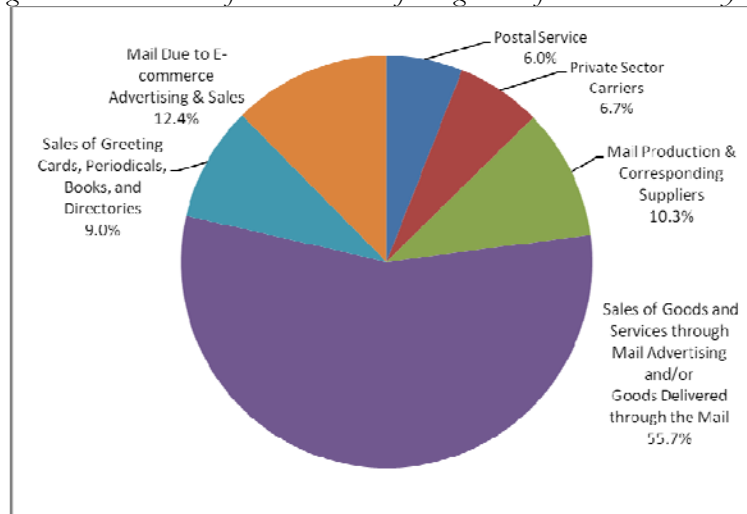

Table 1 provides the data behind the previous two charts. Overall, the existence of private and public delivery networks supports 87.4% of the \$1.139 trillion in economic activity that depends on their existence.

*Table 1*  
*Sources of the Economic Impact of the Mailing Industry*

Source of Economic Impact	Impact (billion \$)	Impact Percent
<b>Producing and Delivering Mail</b>		
<b>Production of Mail</b>		
Direct Marketing Expenditures (3)	27.51	2.4%
Printing and Paper (1) (6)	89.59	7.9%
<b>Production Subtotal</b>	<b>117.10</b>	<b>10.3%</b>
<b>Delivery</b>		
Couriers and Messengers (1)	73.12	6.4%
Postal Service (2)	68.09	6.0%
Private Mail Services (4)	2.75	0.2%
<b>Carrier Subtotal</b>	<b>143.96</b>	<b>12.6%</b>
<b>Subtotal Producing and Delivering Mail and Parcels</b>	<b>261.06</b>	<b>22.9%</b>
<b>Sales of Goods and Services</b>		
From non-catalog Direct Mail	445.80	39.1%
From Catalogs	110.50	9.7%
From Direct Response Magazines	68.40	6.0%
From Insert Media	9.50	0.8%
From Greeting Card Publishers (4)	4.86	0.4%
From Periodical Publishers (1)	42.78	3.8%
From Book / Directory / List Publishers (1)	55.00	4.8%
From Electronic shopping and mail-order houses (5)	141.10	12.4%
<b>Subtotal Sales of Goods and Services</b>	<b>877.94</b>	<b>77.1%</b>
<b>Total All Sources</b>	<b>1,139.00</b>	<b>100.0%</b>

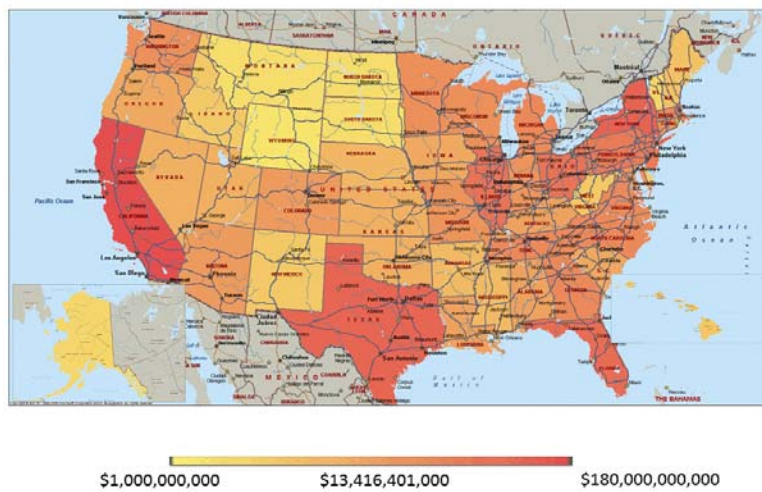

The total economic impact was distributed to each of the fifty states based on where the economic activity actually occurs. Distribution of economic activity associated with printed advertising was performed by the Direct Marketing Association. All other sources of mailing industry economic activity associated were distributed by district using information collected by Dunn and Bradstreet.

Table 2 identifies economic activity associated with the mailing industry in all fifty states and the District of Columbia. The largest impact is in California that had over \$164 billion in sales associated with the mailing industry. Figure 3 provides a map that illustrates the tabular information with the darker the color the more mailing industry sales are generated in that state.

*Table 2  
Mail Related Sales by State (thousands of dollars)*

State	Total Sales	State	Total Sales
Alabama	12,667,060	Montana	2,190,767
Alaska	2,612,567	Nebraska	7,642,195

New Jersey	NJ-11	4,946,418
Massachusetts	MA-09	4,888,909

---

### JOBS IN THE MAILING INDUSTRY

---

The analysis presented in this report basically replicated the approach used in the 2008 study with the most current data available. The analysis included updating the methodology in two important respects and making significant improvements in measuring jobs associated with Postal Service's cash outlays and jobs associated with e-commerce businesses that rely on the industry for delivery services. This section presents the results with the changes in methodology. Appendix B provides the results without the improvements in methodology.

## 2010 JOBS ESTIMATION METHODOLOGY

The 2010 Methodology estimates that the mailing industry has 8,661,394 jobs.<sup>3</sup> In addition to the changes in the estimate due to updates in source data, the new estimates increased the number of jobs in two ways.

The new methodology more fully measured the impact of cash expenditures of the Postal Service in two ways. First, the list of supplies and services that the current study included in the analysis was expanded from the list used in the previous study. Areas added included utilities and fuel costs, rent of buildings, and several new transportation categories. Second, the study employed the Bureau of Economic Affairs RIMS II input-output model to more fully measure the impact of Postal Service purchasers. The use of the RIMS II model allows for an estimation of a portion of the supply chain jobs that provide the supplies and services that the Postal Service purchases. These changes added 50,743 jobs from what the old methodology estimated.

The new methodology added jobs associated with e-commerce and catalog retailers that are not created by mail advertising. This addition included an additional 151,212 jobs to the overall estimate.<sup>4</sup>

---

<sup>3</sup> If e-commerce and catalog industry jobs that were not created by mail advertising had been included in 2008 study, the number of jobs estimated in 2008 would have been 8,571,179 rather than the 8,318,239 reported. It has now been determined that most jobs in electronic shopping and mail order houses are not advertised by mail so they have been added in the current study.

<sup>4</sup> In 2006, the number of e-commerce and catalog industry jobs that were not provided by mail advertising was 141,056. Between 2006 and 2009, the number of e-commerce and catalog industry jobs that were not provided by mail advertising increased by 10,156.

Table 4 below shows the difference between the number of jobs estimated in the 2008 study and the number of jobs estimated in the current study.

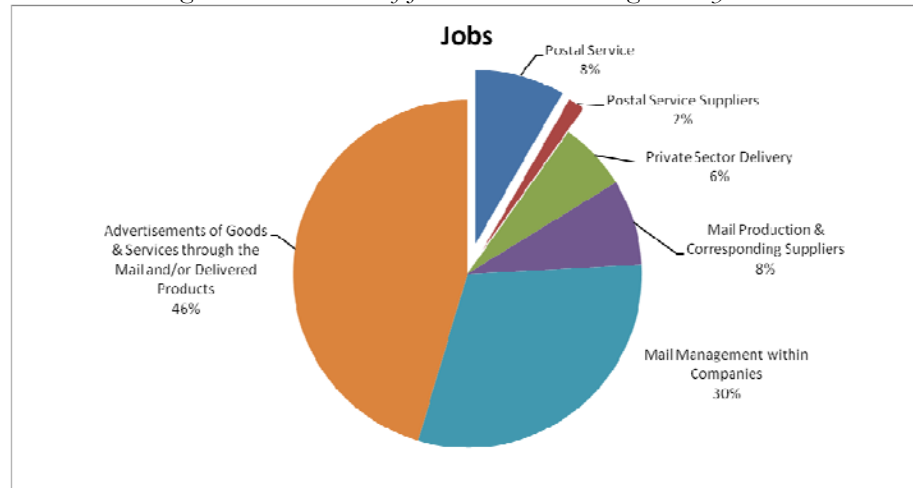

*Table 4  
Mailing Industry Jobs using the 2010 Study Methodology*

Job Category	Number of Jobs (2009)	Number of Jobs (2006)	Absolute Change	% Change
<b>Mail Production and Distribution and Handling</b>				
Postal Service	720,200	737,112	-16,912	-2.30%
Postal Service Suppliers	131,060	80,317	50,743	63.20%
Private Sector Delivery (Couriers, Messengers and Private Mail Centers)	552,271	454,994	97,277	21.40%
Printing, Printing Industry Suppliers, and Direct Mail Design	690,463	805,340	-114,877	-14.30%
<i>Subtotal</i>	2,093,994	2,077,763	16,231	0.80%
<b>Management of Mail in all Industries</b>				
Mail Management in all Industries	2,632,946	2,451,923	181,023	7.40%
<i>Subtotal</i>	2,632,946	2,451,923	181,023	7.40%
<b>Total Jobs in Mail Production and Distribution</b>	<b>4,726,940</b>	<b>4,529,686</b>	<b>201,943</b>	<b>4.50%</b>
<b>Jobs Due to Sales of Products &amp; Services Advertised By or Delivered By the Mailing Industry</b>				
Catalogue Generated Sales	2,556,768	2,496,800	59,968	2.40%
Non-catalogue direct mail Generated Sales	625,481	624,800	681	0.10%
Direct Response Magazine Ad Sales	424,181	418,600	5,581	1.30%
Insert Advertising Sales	56,259	51,600	4,659	9.00%
Publishing of Periodicals, Books, Greeting Cards & Directories	120,552	196,753	-76,201	-38.70%
Electronic Shopping and Mail Order Houses	151,212	-	N/a	N/A
<b>Total Jobs Due to Sales of Products &amp; Services Advertised By or Delivered By the Mailing Industry</b>	<b>3,934,453</b>	<b>3,788,553</b>	<b>145,900</b>	<b>3.90%</b>
<b>Total Jobs</b>	<b>8,661,394</b>	<b>8,318,239</b>	<b>343,155</b>	<b>4.10%</b>

**Note:** If e-commerce and catalog industry jobs that were not created by mail advertising had been included in 2008 study, the number of jobs estimated in 2008 would have been 8,571,179 rather than the 8,318,239 reported.

Figure 4 presents the data in the prior table graphically and clearly shows that the Postal Service represents just a small part of the total industry. As the core of the industry, it represents only 8.3% of all jobs in the industry. The Postal Service provides the infrastructure for a large number of mailing industry jobs which are very important to the U.S. economy.

Figure 4: Distribution of Jobs within the Mailing Industry

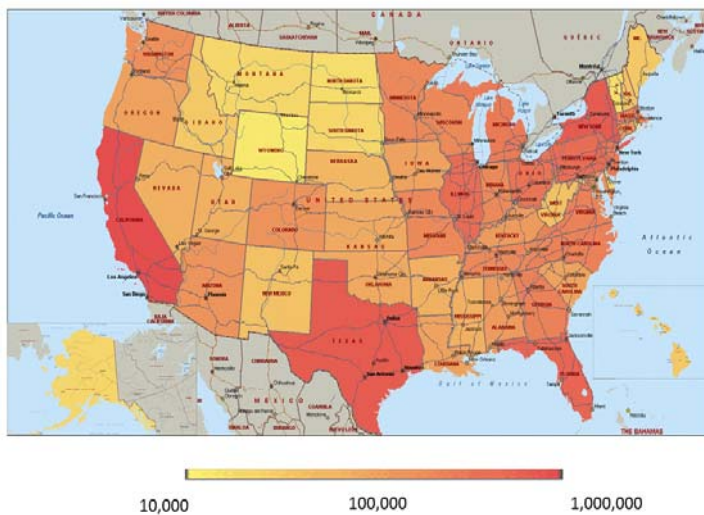

The jobs estimated as part of this project were distributed to each state and Congressional district. The following table identifies the mailing industry jobs by state. Figure 5 provides a map that illustrates the tabular information with the color of the state illustrating the number of jobs in the state with the darker the color the more jobs are in the state.

Table 5: Mailing Industry Jobs by State

State	Total Jobs	State	Total Jobs
Alabama	114,185	Montana	24,525
Alaska	22,326	Nebraska	57,768
Arizona	138,340	Nevada	64,619
Arkansas	67,704	New Hampshire	42,160
California	992,122	New Jersey	288,303
Colorado	138,783	New Mexico	42,538
Connecticut	121,519	New York	598,349
Delaware	26,800	North Carolina	236,850
Dist. of Columbia	55,822	North Dakota	20,619
Florida	504,149	Ohio	369,329
Georgia	252,824	Oklahoma	86,848
Hawaii	35,544	Oregon	97,887

Virginia	VA-08	34,188

---

## APPENDIX A

### DATA SOURCES

---

The study used the following data sources:

**Census Bureau’s 2007 Economic Census** – Data from this source was used to estimate the proportion of jobs within a broad industry category that are associated with specific industries that deliver mail or parcels, are part of the mail production supply chain, or are associated with mail related publishing and internet sales. The economic census was used as a basis for the old methodology for measuring the impact of Postal Service cash spending.

**Census Bureau’s Weekly Retail Sales Report** – Data from this source used to measure e-commerce and catalog sales

**2009 Bureau of Labor Statistics’ Occupation Employment Statistics Program** – were used to estimate all jobs associated with occupations associated with mail within government and private sector entities that handle mail and parcels as part of their everyday business operations for entities not designated as involved in either the delivery of mail and parcel or the mail production supply chain. This document also provided the basis for a consistent estimate of jobs associated with industries that deliver mail and parcels, are part of the mail production supply chain, or are associated with mail related publishing and internet sales.

**RIMS II multiplier developed by the Bureau of Economic Analysis of the U.S. Department of Commerce** – This multiplier provides an estimate of the number of jobs created in an industry’s supply chain in a particular state by purchases from a particular industry. The multiplier was used to estimate the number of jobs associated with the Postal Service’s cash spending for the new methodology employed in this study.

**Bureau of Labor Statistics, 2008 National Employment Matrix** – This data source provided data used to estimate jobs in mail related occupations of self-employed individuals.

**“The Power of Direct Marketing 2009-2010”, Direct Marketing Association** – This data source provided jobs associated with direct mail advertising. The data was also used to estimate the portion of publishing and e-commerce jobs that were Appendix B.

---

## APPENDIX B

### COMPARISON OF ESTIMATE OF MAILING INDUSTRY JOBS

#### USING 2008 STUDY METHODOLOGY

---

The current study used data sources identified above of the most recently released data from the fall of 2010 (2009 data). The updated data sources resulted in an increase of 111,884 jobs. The results clearly show that jobs associated with mail production declined since the previous study. Jobs increased in businesses involved in selling goods and services via the mail and the internet, and in firms in the private sector that deliver mail and parcels. Finally, jobs increased in mail related occupations that appear to be related to shifts in economic growth across various economic sectors as well as what appears to be outsourcing of mail intensive jobs to firms that perform those functions on a contract basis.

The differences in the data sources are as follows:

Economic Census (2007 vs. 2002)

Occupation Employment Statistical Program (2009 vs. 2006)

USPS Financial Reports (2009 vs. 2006)

DMA Estimated Direct Mail related jobs (2009 vs. 2006)

Bureau of Labor Statistics, National Employment Matrix (2008 vs. 2006)

The following table shows the difference in the jobs estimate using the 2008 methodology.

Table A1: Mailing Industry Jobs Comparison using the older Mail Industry Job Study Methodology

Job Category	Number of Jobs (2009)	Number of Jobs (2006)	Absolute Change	% Change
<b>Mail Production and Distribution and Handling</b>				
Postal Service	720,200	737,112	-16,912	-2.30%
Postal Service Suppliers	51,002	80,317	50,743	-36.60%
Private Sector Delivery (Couriers, Messengers and Private Mail Centers)	552,271	454,994	97,277	21.40%
Printing, Printing Industry Suppliers, and Direct Mail Design	690,463	805,340	-114,877	-14.30%
<i>Subtotal</i>	2,013,936	2,077,763	-63,827	-3.10%
<b>Management of Mail in all Industries</b>				
Mail Management in all Industries	2,632,946	2,451,923	181,023	7.40%
<i>Subtotal</i>	2,632,946	2,451,923	181,023	7.40%
<b>Total Jobs in Mail Production and Distribution</b>	<b>4,646,882</b>	<b>4,529,686</b>	<b>117,196</b>	<b>2.60%</b>
<b>Jobs Due to Sales of Products &amp; Services Advertised By or Delivered By the Mailing Industry</b>				
Catalogue Generated Sales	2,556,768	2,496,800	59,968	2.40%
Non-catalogue direct mail Generated Sales	625,481	624,800	681	0.10%
Direct Response Magazine Ad Sales	424,181	418,600	5,581	1.30%
Insert Advertising Sales	56,259	51,600	4,659	9.00%
Publishing of Periodicals, Books, Greeting Cards & Directories	120,552	196,753	-76,201	-38.70%
Electronic Shopping and Mail Order Houses		-		
<b>Total Jobs Due to Sales of Products &amp; Services Advertised By or Delivered By the Mailing Industry</b>	<b>3,783,241</b>	<b>3,788,553</b>	<b>145.9</b>	<b>-0.10%</b>
